

## The BMA team

The team involved in the project consists of the head of the agency Dragoș David and two people from the environmental department, Alina Suciuc and Diana Simileanu.

They have experience in environmental protection activity acquired during the years in which the agency was custodian of the protected area Mount Tâmpa and carried out activities necessary to implement the management plan, development and coordination of projects aimed at environmental protection, adaptation to climate change and ecological education activities for the younger generation.

Realized projects:

- "EME Natura 2000" funded by the EU through the LIFE + program (supporting the integration of biodiversity conservation elements in the spatial planning process)
- The annual campaign "Tâmpa Mountain Protected Area Days" started in 2014 (promoting biodiversity in urban areas and ecological education of civil society)
- "We plant ideas for a healthy life" (planting shrubs and fruit trees, organizing a mini vegetable garden in the yard of the „Mircea Cristea” College in Brasov)
- "We plant ideas for the future" (eliminating the heat island from the yards of some schools by planting shrubs and flowers)
